

## **CIVIL ENGINEER**

Our rapidly expanding Engineering Services Department has exciting career opportunities. Under the general supervision of the City Engineer, each Civil Engineer provides review of assigned proposed or contracted engineering designs and specifications for improvement projects. Candidates will provide consultation and direction in developing future projects or resolving current engineering problems with developers, contractors and construction managers. This position evaluates issues and concerns raised by citizens and city officials. Duties include (but are not limited to):

- Review, approve or reject engineering designs and specifications submitted for review.
- Provide consultation and direction in developing future projects or resolving current engineering problems with developers, contractors, and construction managers.
- Review, revise and establish consistent design standards, construction details and specifications to meet City standards and engineering practices.
- Review field notes, sketches and specifications of easements or provide recommendations.
- Conduct on site inspections of work in progress as assigned.
- Review floodplain information for establishment of floodplains and floodplain reclamation projects.
- Evaluates issues & concerns raised by citizens and city officials.

Must have knowledge of civil engineering practices and principals, construction engineering designs and government rules and regulations.

Civil Engineer candidates will have a Bachelor's Degree in Civil Engineering, Structural Engineering or related field plus four (4) years progressively responsible experience in Civil Engineering. Must possess Texas Registered Professional Engineer license or ability to obtain in 12 months. Must pass pre-employment drug screen and MVR check. EOE.

Salary is based upon experience. Please send salary history with resume.
